

INCIDENT MANAGEMENT SITUATION REPORT
Wednesday 9/01/93 0530 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack and large fire activity.

CASTLE, California Desert District, BLM - 130 acres. Contained.

RUSSIA, Sequoia NF - 1,485 acres. Contained.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: Initial attack activity.

SOUTHWEST: Initial attack activity.

ROCKY MOUNTAIN: Initial attack and large fire activity.

RAWLINGS, Wyoming State and Medicine Bow NF - 191 acres. The fire is burning in ponderosa pine approximately 5 miles northwest of Garrett. No estimate of containment.

EASTERN: Initial attack activity.

SOUTHERN: Initial attack and large fire activity.

ICWW, McFaddin NWR - 1,200 acres. Containment expected 9/1.

OAKALLA, Texas State - 320 acres. Contained.

HURRICANE EMILY, Richmond, VA - A Type I Team (Mann) has been mobilized to establish a Receiving and Distribution Center.

HURRICANE EMILY, Raleigh, NC - A Type II Team (Coats) has been mobilized to establish and operate a Mobilization Center.

ANALYSIS: Support to FEMA in anticipation of Hurricane Emily continued. Fire activity continued in Southern California, the Rocky Mountain and Southern Areas. The remainder of the U.S. reported minimal activity.

PROGNOSIS: Monsoon moisture will remain over the southwest and southern Great Basin with slightly drier air to the north. California remains mostly sunny with afternoon and evening thunder showers over the mountains and deserts. A stationary front will extend across eastern and southern Texas bringing widely scattered afternoon and evening thundershowers. Fire activity is expected to remain moderate in most geographic areas. Hurricane Emily will brush the coast turning to the northeast off Delaware.

INCIDENT MANAGEMENT SITUATION REPORT
Thursday 9/02/93 0530 MDT
Preparedness Level I

ALASKA: No significant activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: No significant activity.

ROCKY MOUNTAIN: No significant activity.

RAWLINGS, Wyoming State and Medicine Bow NF - 191 acres. Controlled.

EASTERN: No activity.

SOUTHERN: Initial attack and large fire activity.

ICWW, McFaddin NWR - 2,500 acres. Contained.

HURRICANE EMILY, Richmond, VA - The Type I Team (Mann) was demobilized 9/1.

HURRICANE EMILY, Raleigh, NC - The Type II Team (Coats) will be demobilized 9/2.

ANALYSIS: Initial attack activity was minimal across the nation. Fair weather has assisted the few large fires to meet their suppression goals. Hurricane Emily turned away from the mainland and incident management resources mobilized for the hurricane are being released.

PROGNOSIS: High pressure will build over California and the Great Basin with sunny weather and higher temperatures. These fair conditions will increase the potential for human caused fires. A cold front will move into western Texas and partly cloudy weather with scattered thundershowers will dominate central Texas. This weather should help moderate fire activity in central Texas.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
Saturday 9/04/93 0900 MDT
Preparedness Level I

ALASKA: No significant activity.

NORTHWEST: No activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: No activity.

ROCKY MOUNTAIN: No activity.

EASTERN: No activity.

SOUTHERN: Initial attack activity.

ANALYSIS: Initial attack and large fire activity was virtually non-existent across the nation.

PROGNOSIS: High pressure will dominate California with isolated thunderstorm activity predicted for northern California and western Nevada. This may result in increased activity in California and Nevada. High pressure is re-established over Texas with fair weather and potential for continued fire activity. The southeast states will see cooler, wetter weather with decreased potential for fires.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
Sunday 9/05/93 0900 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: No activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: No activity.

ROCKY MOUNTAIN: No activity.

EASTERN: No activity.

SOUTHERN: Large fire activity.

WEST END, McFaddin NWR, FWS - 1,500 acres. Contained.

ANALYSIS: Initial attack activity increased slightly in Western Great Basin Area and North Zone. Texas experienced large fire activity. The rest of the nation experienced minimal fire activity.

PROGNOSIS: California will be slightly cooler with mostly sunny skies. Isolated thunderstorms are forecast for the northern Sierras and eastward. A low off the California coast may eject minor bands of moisture into northern California, Oregon, southern Idaho, Nevada, and Utah. This may lead to an increase in thunderstorms and fires. High fire potential will continue in Central Texas as the area remains under the influence of a high pressure system. Activity in the southeast states should be minimal as a cold front slowly dissipates.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
Monday 9/06/93 0900 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: No significant activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack, and large fire activity.

WILDWASH 2, California Desert District, BLM - 100 acres. No estimate of containment.

NORTHERN ROCKIES: Initial attack activity.

EASTERN GREAT BASIN: initial attack activity.

WESTERN GREAT BASIN: Initial attack activity.

SOUTHWEST: No activity.

ROCKY MOUNTAIN: No significant activity.

EASTERN: No activity.

SOUTHERN: No significant activity.

ANALYSIS: Initial attack activity was experienced in Nevada, Utah, California and the Northern Rockies. Fire activity elsewhere in the nation was minimal.

PROGNOSIS: A RED FLAG WARNING has been issued in Washington for east winds. East winds will be more localized in Oregon with isolated, dry thunderstorms east of the Cascades. The Great Basin and northern California will be mostly sunny with isolated to widely scattered dry thunderstorms in the afternoon. Initial attack may increase in these areas in association with forecasted weather conditions and lightning holdovers. A cold front lingers over the east coast with scattered thundershowers while high pressure continues to dominate from central Texas to Louisiana.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
Tuesday 9/07/93 0530 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack and large fire activity.

WILDWASH 2, California Desert District, BLM - 200 acres. Controlled.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: Initial attack activity.

WESTERN GREAT BASIN: Initial attack and large fire activity.

MARY'S CREEK, Elko District, BLM - 1,280 acres. No estimate of containment.

SOUTHWEST: No activity.

ROCKY MOUNTAIN: No significant activity.

EASTERN: No activity.

SOUTHERN: No significant activity.

ANALYSIS: The Western Great Basin and Northwest Area experienced an increase in initial attack as a result of isolated dry lightning and holdovers. Limited initial attack occurred in California and Utah.

PROGNOSIS: A RED FLAG WARNING is in effect for east winds early Tuesday morning on the west side of the North Cascades in Washington. Isolated thunderstorms are predicted for areas east of the Cascades. The potential for fire activity will increase in the Great Basin and northern California with isolated thunderstorms and warmer, drier weather forecast. Southern California will continue to be sunny, hot and dry. Minimal initial attack is expected for most of the Southern Area, with scattered showers and thunderstorms.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
Wednesday 9/08/93 0530 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: No significant activity.

CALIFORNIA SOUTH ZONE: Initial attack activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: Initial attack activity.

WESTERN GREAT BASIN: Initial attack and large fire activity.

MARY'S CREEK, Nevada State - 1,325 acres. Containment expected today, 9/8.

BLUE, Ely District, BLM - 200 acres. Containment expected today, 9/8.

SOUTHWEST: No significant activity.

ROCKY MOUNTAIN: Initial attack activity.

EASTERN: No significant activity.

SOUTHERN: Initial attack activity.

ANALYSIS: Fire activity was moderate in the western states with the majority of initial attack occurring in southern California and the Rocky Mountain Area. The Southern Area experienced minimal initial attack activity.

PROGNOSIS: A RED FLAG WARNING remains in effect for east winds on the west side of the Cascades in Washington; otherwise sunny and warmer weather will prevail in the Northwest Area. High pressure combined with a dry, warm air mass will limit thunderstorm development in the Great Basin and northern California. Initial attack is expected to be moderate. Southern California anticipates initial attack activity to continue with little change in the weather pattern. The Southern Area will continue to experience partly cloudy skies with showers and thunderstorms, which should minimize fire activity.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
Thursday 9/09/93 0530 MDT
Preparedness Level I

ALASKA: No significant activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack and large fire activity.

CLEVENGER, San Diego RU, California State - 600 acres. Containment expected today, 9/9.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: Initial attack and large fire activity.

MARY'S CREEK, Nevada State - 1,325 acres. Contained.

BLUE, Ely District, BLM - 200 acres. Containment expected today, 9/9.

SOUTHWEST: Initial attack activity.

ROCKY MOUNTAIN: Initial attack activity.

EASTERN: No activity.

SOUTHERN: Initial attack activity.

ANALYSIS: Initial attack activity increased in California and continued in Texas and northern Florida. Containment targets expect to be met on large fires in Nevada and California. No significant fire activity occurred in the remainder of U.S.

PROGNOSIS: A RED FLAG WARNING is in effect for very warm temperatures and low humidity for western Washington, which may increase initial attack activity. A RED FLAG WATCH has been issued for the northern Sacramento Valley for low relative humidities and drying fuels. High pressure associated with a dry, warm air mass dominates northern California, the Northwest Area and the Great Basin. Thunderstorm development will be limited due to this stable air mass. Initial attack activity is expected to be moderate. Partly cloudy skies with scattered showers and thunderstorms are forecast for the Southern Area, which should minimize fire activity.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
Friday 9/10/93 0530 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack and large fire activity.

CLEVENGER, San Diego RU, California State - 409 acres. Contained.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: Initial attack and large fire activity.

BLUE, Ely District, BLM - 200 acres. Contained.

SOUTHWEST: Initial attack activity.

ROCKY MOUNTAIN: No significant activity.

EASTERN: Initial attack activity.

SOUTHERN: Initial attack activity.

ANALYSIS: Light initial attack activity continued throughout California, Arizona, the Northwest and the Great Basin. Moderate initial attack activity continued in Texas and northern Florida.

PROGNOSIS: A RED FLAG WARNING has been issued for higher elevations of the western Cascade Mountains of Washington for very warm temperatures and low humidity. A RED FLAG WARNING will continue for the northern Sacramento Valley for low relative humidity and drying fuels. This warm weather will make conditions more conducive to increased fire activity, however the air mass over the northwest states will be stable and thunderstorms will not play a significant part in new fire starts. The remainder of the west will be mostly sunny with no significant increase in fire activity. The Southern Area is dominated by a weak cold front with scattered showers and thunder showers. Activity in the southern states will remain moderate.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
SATURDAY 9/11/93 0900 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: Initial attack activity.

ROCKS, Fishlake NF - 250 acres. Contained.

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: Initial attack activity.

ROCKY MOUNTAIN: Initial attack activity.

EASTERN: Initial attack activity.

SOUTHERN: No significant activity.

ANALYSIS: Initial attack activity was moderate throughout California. The remainder of the U.S. experienced light fire activity.

PROGNOSIS: A RED FLAG WARNING has been issued for strong winds to 30 mph for eastern Washington Saturday afternoon and across eastern Oregon Saturday night. A RED FLAG WATCH is in effect for strong winds across the grasslands below 7,000 foot elevations in southern Idaho and western Wyoming on Sunday, increasing the possibility of escaped fires. As the high pressure weakens over the West, cooler temperatures and increasing clouds will reduce the fire danger. The Southern Area will experience sunny and mild conditions as the cold front has moved offshore. Activity in the southern states should decrease.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
SUNDAY 9/12/93 0900 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: Initial attack and large fire activity.

DIAMOND CREEK, Boise District, BLM - 200+ acres. Containment expected today, 9/12.

WESTERN GREAT BASIN: Initial attack activity.

SOUTHWEST: No significant activity.

ROCKY MOUNTAIN: No significant activity.

EASTERN: No significant activity.

SOUTHERN: No significant activity.

ANALYSIS: Initial attack activity was light throughout all geographic areas. Windy conditions did not affect initial attack efforts.

PROGNOSIS: A RED FLAG WATCH is posted for north to east winds for northern California from a dry, northerly flow aloft over the west coast. A RED FLAG WARNING continues for strong winds and low relative humidities for southeastern Oregon, southern Idaho and southwest Wyoming for grass/sage fuels under 7,000 feet. Cooler weather across the Northwest, Montana and the Great Basin should reduce fire potential. The Southern Area will experience sunny and mild conditions, which may keep fire activity at minimal levels.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
MONDAY 9/13/93 0530 MDT
Preparedness Level I

ALASKA: No report.

NORTHWEST: No significant activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: Initial attack and large fire activity.

DIAMOND CREEK, Boise District, BLM - 421 acres. Controlled.

HENDERSON HILL, Dixie NF - 700 acres. ' Gusting winds and steep terrain impede control efforts. Containment is expected today, 9/13.

FLAT CANYON, Manti-Lasal NF - 400 acres. Erratic winds, steep terrain and heavy fuels contribute to control problems. Containment expected today, 9/13.

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: No report.

ROCKY MOUNTAIN: No significant activity.

EASTERN: No report.

SOUTHERN: No significant activity.

ANALYSIS: Moderate initial attack was experienced in California and the Great Basin. Gusty winds associated with the passage of a cold front contributed to control problems on several fires in Utah. All other geographic areas reported very limited fire activity.

PROGNOSIS: A RED FLAG WARNING is in effect for strong north to east winds in northern California. The associated dryness increases the potential for initial attack. The Great Basin will experience cooler temperatures with variable cloudiness in Utah and clear skies in Nevada. Fair skies and slightly warmer temperatures are forecast for Idaho, eastern Oregon and eastern Washington. Fire activity is expected to be moderate. In the Southern Area, a low pressure trough will bring scattered showers and thunderstorms to central Texas and Louisiana. This should limit fire activity in that area.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
TUESDAY 9/14/93 0530 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: No significant activity.

CALIFORNIA SOUTH ZONE: Initial attack activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: Large fire activity.

HENDERSON HILL, Dixie NF - 700 acres. Contained.

FLAT CANYON, Manti-Lasal NF - 225 acres. Windy conditions and steep terrain continued to impede suppression efforts. Containment expected today, 9/14.

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: No significant activity.

ROCKY MOUNTAIN: No significant activity.

EASTERN: Initial attack activity.

SOUTHERN: Initial attack activity.

ANALYSIS: Initial attack activity was minimal throughout all geographic areas. Containment targets were met on most of the large fires in the Eastern Great Basin.

PROGNOSIS: The western states will experience mostly warm and sunny weather, with gusty winds occurring in some areas. Strong southwest winds are forecast for northwest Nevada and the east slopes of the Oregon Cascades. Southern California will have strong north to northeast winds in the mountains and deserts. The potential exists for an increase in activity in areas where gusty winds are expected to occur. The Southern Area will experience partly to mostly cloudy skies with widely scattered showers and thundershowers. This weather pattern should hold fire activity to a minimal level.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
WEDNESDAY 9/15/93 0530 MDT
Preparedness Level I

ALASKA: No significant activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: No significant activity.

CALIFORNIA SOUTH ZONE: No significant activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: Initial attack activity.

FLAT CANYON, Manti-Lasal NF - 225 acres. Beginning 9/15 the fire will be managed under a confinement/limited strategy.

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: No significant activity.

ROCKY MOUNTAIN: No significant activity.

EASTERN: Initial attack activity.

SOUTHERN: Initial attack activity.

ANALYSIS: Initial attack activity was moderate throughout the nation.

PROGNOSIS: A RED FLAG WATCH has been issued for southwest Utah for gusty southwest winds, low humidity and low fuel moisture. Northern Nevada and Utah will see increasing clouds with isolated afternoon and evening showers or thunderstorms. The southern portion of the Great Basin will be mostly sunny and fair. California will experience mostly sunny and warm weather, except for isolated mountain showers in the extreme northern portion. Fire activity is expected to remain moderate in California and the Great Basin. The Southern Area will continue to have areas of showers and thundershowers, keeping fire activity to a minimum.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
THURSDAY 9/16/93 0530 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: No significant activity.

CALIFORNIA NORTH ZONE: No significant activity.

CALIFORNIA SOUTH ZONE: No significant activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: Initial attack activity.

WESTERN GREAT BASIN: Initial attack activity.

SOUTHWEST: No significant activity.

ROCKY MOUNTAIN: No significant activity.

EASTERN: No significant activity.

SOUTHERN: No significant activity.

ANALYSIS: Moderate initial attack activity occurred in the Great Basin. The remainder of the nation experienced minimal activity.

PROGNOSIS: An upper trough of low pressure will extend across the Pacific Northwest and northern Great Basin with isolated showers and thunderstorms. Southern Nevada and southwest Utah will be sunny with breezy conditions. California will be mostly fair and sunny except for the extreme northern portion, which will be under the influence of the low pressure trough. Anticipate moderate initial attack to continue. In the Southern Area, a stationary front extending from West Virginia to southern Mississippi will continue to bring showers and thundershowers. Fire activity should remain minimal.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
FRIDAY 9/17/93 0530 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: No significant activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: No significant activity.

ROCKY MOUNTAIN: No significant activity.

EASTERN: No activity.

SOUTHERN: No significant activity.

ANALYSIS: Initial attack activity occurred in northern California and southern Oregon as a result of widely scattered thunderstorms. Fire activity remained minimal elsewhere.

PROGNOSIS: The upper trough of low pressure will move across northern Nevada and into Utah bringing scattered showers and thundershowers. Southern Nevada will remain mostly sunny and warm. Anticipate limited fire activity. Northern California should be mostly sunny except for isolated thunderstorms in the Sierra Nevada and northern mountains. Initial attack is expected to be moderate with the possibility of some holdovers. Southern California will see little change, with the continuance of fair and sunny weather. Most of the Southern Area remains under the influence of a stationary front, holding fire activity to a minimum.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
SATURDAY 9/18/93 0900 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: No activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: No significant activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: Initial attack and large fire activity.

CALLAHAN, Battle Mountain District, BLM - 100 acres. Containment expected today, 9/18.

SOUTHWEST: No significant activity.

ROCKY MOUNTAIN: No activity.

EASTERN: No activity.

SOUTHERN: No significant activity.

ANALYSIS: A small amount of initial attack activity occurred in northern Nevada, California, Arizona, and in central Texas.

PROGNOSIS: An upper level low pressure system will move from central Utah into southeast Wyoming bringing with it cloudy skies and a chance of rain. Utah and central Nevada will be partly cloudy with scattered showers and thunderstorms. The Southeastern U.S. will have variable cloudiness with scattered showers and thundershowers from the Carolinas into Georgia and Florida. These weather patterns should continue to keep fire activity at a minimum in these areas. California and the Southwest should experience mostly clear skies with warm temperatures. Initial attack activity can be expected in these areas today.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
SUNDAY 9/19/93 0900 MDT
Preparedness Level I

ALASKA: No report.

NORTHWEST: No activity.

CALIFORNIA NORTH ZONE: No significant activity.

CALIFORNIA SOUTH ZONE: Initial attack activity.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: Initial attack and large fire activity.

CALLAHAN, Battle Mountain District, BLM - 200 acres. Contained.

SOUTHWEST: No significant activity.

ROCKY MOUNTAIN: No activity.

EASTERN: No report.

SOUTHERN: Initial attack activity.

ANALYSIS: Initial attack activity was reported in Nevada, southern California and Texas with little activity reported elsewhere.

PROGNOSIS: A weak ridge of high pressure will build over the Great Basin producing a dry air mass with warmer temperatures. It will be sunny in the morning and partly cloudy in the afternoon in California, Nevada, and Utah. Widely scattered thunderstorms are predicted for Florida and southern Georgia which may produce some initial attack activity. The rest of the Southern Area will be partly cloudy.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
MONDAY 9/20/93 0530 MDT
Preparedness Level I

ALASKA: No report.

NORTHWEST: No report.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack activity.

NORTHERN ROCKIES: No report.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: No report.

ROCKY MOUNTAIN: No activity.

EASTERN: No report.

SOUTHERN: No significant activity.

ANALYSIS: Minor initial attack activity was reported in California.

PROGNOSIS: Another upper trough of low pressure develops over the Pacific Northwest and northern Great Basin. Partly cloudy skies and moderate temperatures are expected, with 15-25 mph southwest winds forecast for Nevada. Northern California, also under the influence of the low pressure trough, will experience partly cloudy skies and slightly cooler temperatures. Southern California will continue to have mostly sunny and warm weather. Minor initial attack activity is anticipated in California and the Great Basin. A stationary front extends across northern Florida, while another cold front moves into the southern Mississippi Valley. This will produce showers and thundershowers over most of the southeastern states. Fire activity should remain at minimal levels.

INCIDENT MANAGEMENT SITUATION REPORT
TUESDAY 9/21/93 0530 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: No significant activity.

NORTHERN ROCKIES: Initial attack activity.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: Initial attack activity.

SOUTHWEST: Initial attack activity.

ROCKY MOUNTAIN: No significant activity.

EASTERN: No report.

SOUTHERN: No significant activity.

ANALYSIS: Minor initial attack activity continued in several of the western geographic areas.

PROGNOSIS: A RED FLAG WATCH has been issued for strong north winds and low humidity in the northern Sacramento Valley, increasing the potential for initial attack activity. Southern California will continue to be warm and mostly sunny, with moderate initial attack expected to continue. A weak cold front will move southward into northern Utah and northern Nevada, bringing cool and windy conditions with isolated showers and thundershowers. Southwestern Utah, southern Nevada and northwestern Arizona will be mostly sunny and breezy. Sporadic initial attack activity is expected to continue. The Southern Area continues to receive showers and thundershowers, holding fire activity to a minimum.

THURSDAY 9/23/93 0530 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack and large fire activity.

BELL, San Diego RU# California State - 300 acres. Containment expected today, 9/23.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No activity.

WESTERN GREAT BASIN: No activity.

SOUTHWEST: No significant activity.

ROCKY MOUNTAIN: No activity.

EASTERN: No activity.

SOUTHERN: No significant activity.

ANALYSIS: Initial attack activity occurred in California. Fire activity in the remainder of the nation was reported as limited to insignificant.

PROGNOSIS: A RED FLAG WATCH is in effect for gusty winds in northern Arizona. An upper level trough over the Great Basin will keep moisture limited to isolated afternoon thunderstorms over the eastern Utah mountains, and eastern Nevada. California will have patchy coastal fog in the morning, otherwise sunny with a slight risk of a thunderstorm over the Sierra Mountains. The Southern Area continues to have high pressure build into the Carolinas. Partly cloudy with scattered showers and mountain thunderstorms, otherwise mostly sunny. Initial attack is expected to continue.

NICC Intelligence Section

INCIDENT MANAGEMENT SITUATION REPORT
Friday 9/24/93 0530 MDT
Preparedness Level I

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

INCIDENT MANAGEMENT SITUATION REPORT
Sunday 9/26/93 0900 MDT
Preparedness Level I

ALASKA: No report.

NORTHWEST: No report.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack and large fire activity.

MARRE, Los Padres NF - 1,000 acres. Type II Team (Lopez) committed. Fire is burning toward the San Rafael Wilderness through an area with numerous archeological sites. Private property with summer homes and some residences are currently threatened. No estimate of containment.

NORTHERN ROCKIES: No report.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: No activity.

SOUTHWEST: Initial attack and large fire activity.

NORTHWEST III, Grand Canyon National Park - 250 acres. The fire is being managed under containment strategy. No further report unless there is significant change.

ROCKY MOUNTAIN: No activity.

EASTERN: No activity.

SOUTHERN: Initial attack activity.

ANALYSIS: Initial attack activity was minor throughout the US.

PROGNOSIS: A RED FLAG WARNING has been issued for low humidity, low fuel moisture and gusty north to east winds for the northern and central California mountains. A RED FLAG WATCH has been issued for Sunday thru Monday for dry northeast to east winds across southern California. A RED FLAG WARNING has been issued for western Oregon and Washington for dry and gusty east winds. Initial attack activity should remain at the levels typical for the time of year. Partly cloudy weather will dominate the Southern Area, with a chance for scattered afternoon thundershowers. Initial attack expected to continue.

INCIDENT MANAGEMENT SITUATION REPORT
Monday 9/27/93 0530 MDT
Preparedness Level I

ALASKA: No report.

NORTHWEST: No report.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack and large fire activity.

MARRE, Los Padres NF - 3,700 acres. Type I Team (Dougherty) committed. Steep, rocky terrain, poor access and spotting are hampering suppression efforts. Private property with summer homes and some residences continue to be threatened. No estimate of containment.

SEVEN OAKS, San Bernardino NF - 150 acres. Current threat is to watershed. No estimate of containment.

CACTUS, Riverside RU, California State - 200 acres. Containment was expected yesterday, 9/26.

NORTHERN ROCKIES: No report.

EASTERN GREAT BASIN: Initial attack activity.

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: Initial attack activity.

ROCKY MOUNTAIN: No activity.

EASTERN: No report.

SOUTHERN: No significant activity.

ANALYSIS: South Zone California experienced an increase in initial attack and large fire activity. Type I crews, helicopters and communications equipment from outside the geographic area have been mobilized.

PROGNOSIS: A RED FLAG WATCH has been issued for dry east winds and low humidity across southern California. A RED FLAG WARNING has been issued for central and northwestern Oregon for dry east winds. A RED FLAG WARNING has been issued for the Cascade mountains in southwestern Washington for strong gusty east winds and low humidity. These conditions may cause an increase in initial attack and impose control problems on existing large fires. A strong high pressure system continues to dominate the entire western U.S. The Great Basin will be sunny and warmer with near record high temperatures in Utah, Nevada and northern Arizona. Initial attack activity is anticipated.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack and large fire activity.

MARRE, Los Padres NF - 7,500 acres. Type I Team (Dougherty) committed. Steep and rocky terrain, low humidity and erratic winds are causing control problems. Eighty-five structures in the Figueroa (Tunnel Ranch), Peach Tree and Happy Canyon areas are currently threatened. Containment expected 9/29.

SEVEN OAKS, San Bernardino NF - 150 acres. No new information received.

CREEK, San Bernardino NF - 123 acres. Containment was expected last night, 9/27. No other information received.

CACTUS, Riverside RU, California State - 200 acres. Contained.

COACH, San Diego RU, California State - 500 acres. Fire started as a structure fire in the city of Poway. Hot dry weather and rough terrain are hindering suppression efforts. Containment expected this morning, 9/28.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No significant activity. ~

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: Initial attack and large fire activity.

NORTHWEST III, Grand Canyon NP - 1,217 acres. Contained.

ROCKY MOUNTAIN: No significant activity.

EASTERN: No significant activity.

SOUTHERN: No significant activity.

ANALYSIS: Southern California continued to experience increased initial attack activity as well as erratic fire behavior on existing fires due to high temperatures, low humidities and windy conditions. Resources mobilized southern California from other geographic areas include Type I crews airtankers and communications equipment.

PROGNOSIS: A RED FLAG WATCH has been issued for very low humidities and fuel moistures for central California. A RED FLAG WARNING has been issued for moderate east winds and low humidity for western Washington. Southern California will be sunny and hot with near Red Flag conditions. Utah, Nevada and northern Arizona will be sunny and hot with near record high temperatures. These conditions may continue to cause control problems on existing fires as well as increase initial attack activity. A strong high pressure system continues to dominate the weather pattern for the entire western U.S., however offshore storm will spread high level clouds over the Pacific coast states.

INCIDENT MANAGEMENT SITUATION REPORT
Wednesday 9/29/93 0530 MDT
Preparedness Level II

ALASKA: No activity.

NORTHWEST: Initial attack activity.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack and large fire activity.

MARRE, Los Padres NF - 22,000 acres. Type I Team (Dougherty) committed. Aggressive fire activity continues. The east line is burning into the San Rafael Wilderness. The northwest side is threatening high value residential areas in the Latigo Canyon area. A structure branch has been activated. No estimate of containment.

SEVEN OAKS, San Bernardino NF - 130 acres. Contained.

CREEK, San Bernardino NF - 123 acres. Containment was expected yesterday, 9/28. No other information received.

COACH, San Diego RU, California State - 705 acres. East winds and steep terrain are causing control problems. The fire continues to threaten residences in Poway and Ramona. Containment expected this morning, 9/29.

DELUZ, Riverside RU, California State - 222 acres. Contained.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No significant activity.

WESTERN GREAT BASIN: No significant activity.

SOUTHWEST: Initial attack activity.

ROCKY MOUNTAIN: No significant activity.

EASTERN: No activity.

SOUTHERN: Initial attack activity.

ANALYSIS: Initial attack and large fire activity continued in southern California resulting in the mobilization of additional resources. Good progress was made toward containment of large fires, except for the Marre fire which continued to exhibit aggressive fire behavior.

PROGNOSIS: A RED FLAG WATCH has been issued for very low humidities and fuel moistures for central California. A RED FLAG WARNING has been issued for east winds and low humidity for western Washington. California will be sunny and hot with very low humidities, except for patchy low clouds along the northern coast. Utah, Nevada and northern Arizona will continue to be sunny and hot. Conditions exist for increasing activity with weather forecasted for California, the Northwest and Great Basin Areas. There is no change in the strong high pressure system that continues to dominate the weather pattern for the western U.S. The offshore storm will continue to spread high level clouds over the Pacific coast states.

INCIDENT MANAGEMENT SITUATION REPORT
Thursday 9/30/93 0530 MDT
Preparedness Level II

ALASKA: No activity.

NORTHWEST: Initial attack and large fire activity.

MEADOW CREEK, Wenatchee NF - 150 acres. Type II Team (Jones) committed. Fire is located just north of Lake Wenatchee. No estimate of containment.

CALIFORNIA NORTH ZONE: Initial attack activity.

CALIFORNIA SOUTH ZONE: Initial attack and large fire activity.

MARRE, Los Padres NF - 30,500 acres. Type I Team (Dougherty) committed. The fire made a major run yesterday afternoon on the northwest corner and is approximately 1 1/2 miles south of the old historic Manzanita School House. The Midland School and Cody Cabins were evacuated as a precaution. Fire activity slowed considerably in the wilderness and on the east flank. No estimate of containment.

CREEK, San Bernardino NF - 123 acres. Controlled.

NORTHFORK, San Bernardino NF - 150 acres. Contained.

COACH, San Diego RU, California State - 705 acres. Contained.

NORTHERN ROCKIES: No significant activity.

EASTERN GREAT BASIN: No activity.

WESTERN GREAT BASIN: Large fire activity.

HOLE, Carson City District, BLM - 105 acres. Controlled.

SOUTHWEST: No significant activity.

ROCKY MOUNTAIN: No significant activity.

EASTERN: No activity.

SOUTHERN: No significant activity.

ANALYSIS: Good progress was made on large fires in California with containment being achieved on all fires except the Marre. Resource mobilization to southern California has stabilized. The Northwest Area experienced an increase in fire activity with one fire escaping initial attack.

PROGNOSIS: A RED FLAG WATCH remains in effect for very low humidities and fuel moistures in central California. Both northern and southern California will continue to have hot, sunny weather with very low humidity. The potential for initial attack and large fire activity is expected to continue. Utah, Nevada and northern Arizona will be mostly sunny and slightly cooler. Fire activity is expected to remain moderate. Fire activity is expected to continue in the Northwest Area with warm, dry and breezy conditions forecast.
